

TPS Pup Joints

FROM STOCK & NEW PRODUCTION

TPS Technitube Röhrenwerke GmbH is your partner for OCTG. Besides manufacturing premium tubing of highest quality, we are also highly specialized in the production of Pup Joints and other accessories.

Our production facilities allow an individual and cost-effective new production. Thanks to a big stock of prematerial, we can realize short lead times for your requirements. To support our clients, we have set up the biggest Tubing Pup Joint stock in Europe with more than 3.500 Pup Joints ready on the shelf. Starting from Macaroni sizes up to heavy wall test strings and with different connections we offer a huge range of specifications.

What is a Pup Joint?

Pup Joints are shorter versions of tubing and casing, used to adjust the length of a string to its' exact requirements. There are many different cases where Pup Joints are necessary: to reach an exact reservoir depth, for setting packers at an exact location within the borehole, to space out your string prior to hanging it and many more.

What are the benefits?

Pup Joints are a mandatory party of equipment in almost any well. Due to their shorter length, they are typically easier to handle and to use. At the same time, they provide the same performance as the tubing/casing/drill pipe that they are attached to. TPS Pup Joints have a lot more advantages beyond that.
